

STRUCTURAL FLOORING & DECKING BOARD 30% MORE COST EFFECTIVE

FIRECRUNCH TONGUE & GROOVE BOARD (T & G)

NEW NEW 16MM AND 19 MM

GET A QUOTE

FireCrunch Tongue & Groove (T&G) is CSIRO NATA Labs fire tested building board which can be used for either interior and exterior walls ,flooring or decking applications in residential and commercial properties.

Our flooring and decking board is resistant to not only fire, but also water, sound, impact, termites, mould and bacteria, FireCrunch is the leading choice as a multi-purpose, all in one building board solution that is also very environmentally friendly.

FireCrunch T&G flooring board is suitable for both interior and exterior flooring and decking applications. It allows for a durable and lighter weight building board that is quick and easy to install.

The T&G board is grooved down one long side with a matching tongue down the other. Our T&G flooring and decking board range comes in a grey finish, distinguishing it from other products.

Tongue and Groove (T&G) board dimensions:

- 16mm thickness, TG16 2700 x 600 mm board size, approximately 32kg
- 19mm thickness, TG19 2700 x 600 mm board size, approximately 39kg

FireCrunch flooring board does not require any special tools for installation, and can be cut and installed with timber tools, and no expensive pre-drilling is required.

Key benefits of FireCrunch 16mm and 19mm T&G:

- 15% less in weight and some 30% less in cost than Compressed Fibre Cement (CFC).
- Superior to many structural flooring and decking products, for use with timber or carpet overlays ,ceramic tiles in wet, semi-wet and dry area
- Designed for serious floors and decks.
- It is stronger, light weight, easy to use and install and pipe routs in seconds with timber routers.
- It has been manufactured and designed to be used in both external and internal applications such as structural flooring using ceramic tiles, marble, slate or granite in wet and dry areas.

FireCrunch is Australian NATA fire tests accredited by CSIRO (firecrunch.com.au/certification) FRL 120/120/120 and carries 6.0 kN loading over 450 centres and is very environmentally friendly.

ENVIRONMENT

Contrary to alternative cement boards, FireCrunch's T&G boards are produced at temperatures around 650°C therefore producing 50% less Co 2 and during the manufacturing process and in final carbonation draws back a further 90%, becoming an almost (5%) carbon neutral product. (New Scientist USA) Magnesium products

WET AREA SAFE

FireCrunch 16mm and 19mm T&G is an extremely dense, hard-wearing and long lasting building sheet that is resistant to permanent water damage when installed and maintained correctly. This makes it the smart choice for laundries, kitchens, bathrooms, floors and decking in both domestic and commercial projects. FireCrunch is also ideal as a substrate for tiling, marble, slate or granite in wet and dry areas.

FIRE ZONE APPROVED

FireCrunch is totally fire resistant. It will not burn in a fire storm. FireCrunch is applicable in BAL 12.5 to 40 and FZ Flame Zone regulation areas when used to protect exposed timber framing, eaves, joists etc. Tested by the CSIRO to worst case scenario fire storm conditions.

Meets AS/NZS 1530.1, 1530.2, 1530.3, 1530.4, 1530.8.1 & 8.2, AS/NZS 3959 and AS/NZS 3837.

TERMITE FREE

One of the biggest issues for Australian homes is Termites. FireCrunch is made from a uniquely formulated, non-toxic fibre composite mix so is impervious to termites and insects.

(TOTALLY PROTECTS EXPENSIVE TIMBER FRAMING)

ENVIRONMENTAL

Cement board and plasterboard manufacturing use kiln temperatures of more than 1300°C. FireCrunch is produced at temperatures around 650°C therefore producing 50% less CO 2 and during the manufacturing process, in carbonation, FireCrunch draws back 90% of the CO 2 produced and makes it a virtually carbon neutral product. 5%

FIRECRUNCH AVAILABILITY

FireCrunch is available now in NSW, QLD, VIC and ACT from selected Mitre 10 and commercial stockists.
